ORGANISATION CHART

OUR INFRASTRUCTURE

PRODUCTION

Our commitment to quality begins with our production process. We partner with state-of-the-art facilities that utilize the most advanced machinery and technology available. This ensures every product is crafted under the highest standards of efficiency and innovation. By working with facilities that have robust processing, quality monitoring, and packaging capabilities, we can guarantee a superior and consistent product for every order.

WAREHOUSING & PACKAGING

To ensure your products arrive in perfect condition, we manage a secure warehousing and packing process. We partner with dedicated facilities that have a large, climate-controlled storage capacity. This allows us to safely house your consignment until it's ready for shipment, maintaining its freshness and quality.

Our detailed inventory management system ensures every batch is meticulously labeled and tracked for quick and accurate delivery. We also prioritize hygienic and high-quality packaging to protect your products from damage during transit and to preserve their nutritional value.

QUALITY CONTROL & ANALYSIS

Our commitment to quality begins with our production process. We partner with state-of-the-art facilities that utilize the most advanced machinery and technology available. This ensures every product is crafted under the highest standards of efficiency and innovation. By working with facilities that have robust processing, quality monitoring, and packaging capabilities, we can guarantee a superior and consistent product for every order.

OUR PRODUCTS

FISH MEAL

At Freelance Fishmeal, we specialize in the production of Steam Dried Fish Meal, a cornerstone in advanced animal nutrition and a potent protein supplement. Our product is meticulously crafted to be a superior resource for essential minerals, vitamins, and critical growth factors, catering to the exacting standards of the global feed industry. The strategic application of our low-temperature steam drying method is central to our process, a technique that preserves the delicate amino acid profiles and bioavailability of nutrients. This method ensures that the final product retains its maximum nutritional efficacy, unlike traditional high-heat drying methods which can denature proteins and compromise the product's value. Our commitment to this process guarantees a final product with a high protein digestibility coefficient, a key metric for maximizing nutrient absorption in livestock and aquaculture species.

FISH OIL

At Freelance Fishmeal & Oil Pvt. Ltd., we produce premium Centrifuged Fish Oil extracted from fresh sardine fish. Rich in Omega-3 fatty acids (EPA & DHA), protein, and essential lipids, it is a natural supplement that delivers high energy and superior nutritional value for animal feed.

Our centrifuged fish oil is widely used in aquaculture, poultry, and livestock industries as it promotes faster growth, enhances feed efficiency, and improves feed conversion ratios (FCR). Produced from fresh, traceable raw materials and processed without harmful chemicals, our fish oil ensures consistent quality and nutritional reliability for both domestic and export markets.

FISH SOLUBLE PASTE

At freelance fishmeal & oil pvt.ltd we produce premium fish soluble paste, Soluble is a semi-viscous substance with a fishy odor and brown color. Fish Soluble Paste is a by-product obtained during the production of fishmeal and fish oil. It is produced from protein-rich water after separating fish oil in the production process through evaporation. The raw materials used for processing are primarily Indian Oil Sardine, Indian Mackerel, lesser sardine, and other low-economic-value fishes caught from the clean and pollutant-free waters of the Arabian Sea. The fish oil produced is fully traceable up to the catching vessel.
